Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 September 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims **1-3 and 5** are rejected under 35 U.S.C. 102(b) as being anticipated by Solazzi (US 6,009,766).

Solazzi discloses a sample cup used for X-ray spectroscopy. The sample cup comprises a cavity for receiving a liquid sample and an open top adapted to be covered by a flexible polypropylene film that is not rigidly connected to the cup (see line 67, col. 3). Because the flexible film is secured only at its periphery by ring 14, surface 44 of the film is capable of moving freely relative to the walls of the sample cup (see Fig. 2C).

Claims **1 and 6** are rejected under 35 U.S.C. 102(b) as being anticipated by Solazzi (US 4,409,854).

Solazzi discloses a sample cup used for X-ray spectroscopy. The cup 18 comprises a cavity for receiving a liquid sample and an open top adapted to be covered by a cap 35 that is wedged into the opening of cup 18.

Claims **1 and 4** are rejected under 35 U.S.C. 102(b) as being anticipated by Fildes (US 4,001,389).

Art Unit: 1743

Fildes discloses a test tube that is covered by a foil (see line 39, col. 7).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 7-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Solazzi (US 6,009,766).

Although Solazzi does not explicitly disclose an X-ray spectrometer or a method for analyzing the contents of the sample cup via X-ray spectroscopy, the reference does disclose that the sample cup is intended for X-ray spectroscopy. It would have been obvious to one of ordinary skill in the art to provide an X-ray spectrometer and analyze the contents of the sample cup using the X-ray spectrometer.
